

CONVERT FSTAT FROM Vs2012 TO Vs2008

1. Open Vs2008 and create a C++ CLR Windows Forms Application.
2. Close Vs2008
3. Copy the following files from the FStat 2012 folder
 - a. *.resx
 - b. *.h
 - c. *.cpp
 - d. *.ico
 - e. *.jpg
 - f. *.png
 - g. *.rc
4. Double-click on the .SLN project in the above created directory.
5. Click F7 to rebuild project. Ignore errors.
6. EnumerateFiles and Directories is incompatible because DotNet 4 is required. Recode that section of Process() with GetFiles() as discussed Feb. 2013.
7. Remove the Background image and the Icon as the Signatures won't work. They may be reinserted into the project later in order to recreate the correct Signatures.
8. Click F7 to recompile the project.

Tested 3/8/2013 with Express Editions. B.Arnold

Note: DotNet 4 requires Vs2010 or Vs2012.
